EXPERIENCE

Software Engineer, Camera Service Team

Snap Inc. – Santa Monica CA, United States | Aug. 2021 – Present

- Develop a data pipeline to build, process, and filter 100k images from database to create a diverse portrait dataset to train Inclusive Camera models using Google Cloud Services and Docker
- Create Python scripts that are scalable for large databases

Software Engineering Intern, Play Movies and TV app (Android)

Google LLC – Mountain View CA, United States | Jan. 2020 – Apr. 2020

- Owned a project Design to Experiment phase to add language tags enabling users to find movies in their preferred language
- Developed production code in C++ and Java using tools such as Guice, Fig, Boq, Sherlog, and BeQut
- Protected user data and completed ethics proposal for API use in app that streamlined user experience
- Maintained excellent performance on independent projects during remote work and changing conditions

Data Science Intern, Data Science Hub

NN Group – Prague, Czech Republic | Oct. 2018 – Apr. 2019

- Developed a generic binary classification engine in Python which compares predictive models in the Scikit-learn package
- Wrote a Python web scraper to extract information and images from over 5000 web pages to train FaceToBMI web app tool
- Created an out-of-the-box Q&A chatbot using Microsoft Bot Services to reduce the workload of call centers by 20%

Project and Change Management Support, Insurance International

NN Group – The Hague, The Netherlands | Jun. 2017 – Dec. 2018

- Project managed compliance with international insurance regulation across 11 business units

- Took initiative to train and on-board new interns providing support and writing guides to assist in adapting to Dutch culture
